What is Sudoku?

Sudoku is a puzzle game that basically consists of a grid 9x9. This area is divided into nine 3x3 subareas called boxes. The goal of the game is to fill the entire area with numbers from 1 to 9 according to the following rules:

Each row in the 9x9 grid must contain all digits from 1 to 9, with no repetition.

Each column in the 9x9 grid must contain every single digit from 1 to 9, with no repetition.

Each of the nine 3x3 boxes must contain every single digit from 1 to 9, with no repetition.

The initial puzzle will have some cells pre-filled with numbers, providing a starting point. These given numbers are called "clues."

The player must deduce the correct placement of numbers in the empty cells by applying logic and using the given clues without violating the three rules mentioned above.

The puzzle is solved when you have successfully filled in all the cells with numbers that meet the rules.

Basic strategy

Solving a Sudoku puzzle is hard work with a combination of logic and deduction. Here's a list of essential strategies to help you get started.

Scanning rows, columns, and boxes in one or two directions:

To start solving a Sudoku, check rows, columns, and boxes and find situations where only one number can fit into this cell. The scanning technique helps you solve sudoku puzzles with fun.

Let's see some examples. Let's number the boxes from one to nine from left to right. Like any other box in Sudoku, box two must contain 5. Look closely at boxes one and three, and they already have 5s. From this, we conclude that the number five in box two must be in the third row.

Because five cannot be in the first and second rows. Now, we do the same with the columns in the range of the second box; as a result, we get the only place where we can put the number five.
